Education

Bachelor of Engineering in Artificial Intelligence and Data Science

June 2026

PVG College of Engineering and Technology, Savitribai Phule Pune University (SPPU)

9.55 CGPA

Relevant coursework: Statistics, Data Mining, Database Management Systems, Machine Learning, Data Visualization, Data Structures & Algorithms

Projects

Veritas AI | [GitHub](#) | [Live Demo](#)

Built an AI-powered oral exam simulator and resume-to-roadmap platform using React, Node.js, MongoDB Atlas, Google GenAI, and NLP.

- Architected an oral exam simulator utilizing Speech-to-Text and Natural Language Processing pipelines for real-time, interactive interview evaluation.
- Integrated Google GenAI with strict Zod schema validation to dynamically parse ATS resumes and generate algorithmic 14-day personalized study roadmaps.
- Engineered a RESTful Node.js backend leveraging MongoDB Atlas for scalable document storage and Clerk for secure cross-origin JWT authentication.

DevDialogue | [GitHub](#) | [Live Demo](#)

Developed an AI-powered collaborative cloud IDE integrating real-time code execution, intelligent code assistance, and browser-based development workflows.

- Developed a full-stack collaborative cloud IDE supporting real-time code execution using the WebContainers API and Node.js.
- Built an AI-powered assistant with Google Gemini to analyze project files, identify code issues, and generate contextual development recommendations.
- Implemented synchronized collaboration via Socket.io across multiple concurrent users, improving developer productivity without local environment setup.

Vehicle Price Regression | [GitHub](#)

Developed a machine learning regression system to predict bulldozer auction prices using large-scale historical equipment datasets.

- Conducted exploratory data analysis on 400,000+ historical auction records to identify trends affecting bulldozer sale prices.
- Cleaned, transformed, and engineered features from large datasets using Python and Pandas to improve model performance.
- Built and evaluated regression models with Scikit-learn following the Kaggle Bluebook for Bulldozers methodology, assessing accuracy via Root Mean Squared Log Error (RMSLE).

Experience

Full Stack Developer Intern – MyJob Grow

- Managed, extracted, and validated application data across relational and NoSQL databases, ensuring high data quality in production environments.
- Queried and manipulated structured data using complex SQL operations in MySQL and PostgreSQL to optimize backend services.
- Analyzed application requirements and business logic to design scalable database schemas and data pipelines.
- Performed data validation, debugging, and testing to ensure pipeline reliability, and collaborated with cross-functional teams using Git-based workflows.

Technical Skills

Programming Languages

Python, SQL, C++, JavaScript

Data Analytics & ML

Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Streamlit, FastAPI

Databases

MySQL, PostgreSQL, MongoDB

Tools & Platforms

Git, GitHub, Jupyter Notebook, Google Colab, VS Code, AWS, Postman

Achievements & Certifications

- Solved 300+ problems on [LeetCode](#), strengthening proficiency in data structures and algorithms.
- Completed the Complete A.I. & Machine Learning, Data Science certification, covering end-to-end workflows in preprocessing, feature engineering, and deep learning.
- Completed the NVIDIA Deep Learning certification, gaining practical knowledge of neural networks for computer vision applications.
- Completed the Responsive Web Design certification from freeCodeCamp, focused on accessible and modern web design practices.
- Completed a comprehensive Web Development certification, covering full-stack application development with React, Node.js, Express.js, and MongoDB.
